## **DETAILED ACTION**

### **Response to Amendment**

This Office Action is responsive to Applicant's amendment and arguments and request for reconsideration of application 09/802,025 filed by the applicant on 5/19/2008.

### **Status of Claims**

- Claims 21, 93-97, 112-126 are cancelled.
- Claim 127 is currently amended.
- Claims 1-20, 22-92, 98-111, 127-131 are pending.

### **Allowable Subject Matter**

**Claims 1-20, 22-92, 98-111, 127-131** are allowed, subject to an examiner's amendment described below.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevan L. Morgan, Registration # 42,015 on August 15, 2008.

***Reasons for Allowance***

Claims **1-20, 22-92, 98-111, 127-131** are allowed. The following is an Examiner's statement of reasons for allowance:

Claims 1, 127 & 128 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 1, including "wherein the trial order identifies an item for trading and a non-zero quantity of the item", as specified in claims 1, 127 and 128.

**EXAMINER'S AMENDMENT**

The application has been amended as follows:

Claims 112-126. (Cancelled).

127. (Currently amended) A computing system comprising a programmed processor that enables an order to interact with at least one market process, the system comprising:

a configuration component that is operable to configure a trading process in accordance with the order, wherein the order identifies an item for trading and is executable by the market process to complete a trade for the item by pairing the order with a contra-side order of another party,

a discovery component that is operable to automatically perform, at the trading

process, market discovery according to a user-selected discovery strategy selected from a plurality of discovery strategies, wherein the discovery strategies are configured to obtain market information for the item in the order according to different discovery methodologies, the selected discovery strategy including automatically sending a trial order to the at least one market process, wherein the trial order identifies an item for trading and a non-zero quantity of the item, and receiving a pairing report from the market process indicating a pairing of the trial order with a contra-side order at a pairing price, wherein upon pairing, the quantity of the item in the trial order is automatically adjusted to zero, the pairing report providing information about current market depth for the item at the pairing price for the non-zero quantity identified in the trial order while the pairing results in an execution of the trial order for a zero quantity of the item, and

an action component that is operable, after said market discovery has been performed, to automatically act upon the order at the trading process according to a user-selected action strategy selected from a plurality of action strategies based on information obtained from performing the market discovery,

wherein the at least one market process and the trading process are software processes implemented on the computing system.
